RE: Proposed Agenda for Interview

DATE AND TIME: Tuesday, April 29th, 2008 @ 1:00 EST

Proposed 30 Minute Interview

I. Brief review of status of case, and nature of the invention

II. Review of rejections of record and prior art applied in the current Office Action

III. Presentation of proposed claim amendments and explanation of how those amendments are believed to overcome the rejections and prior art of record

IV. Discussion with Examiner and any further amendments resulting from the Examiner's views and comments, with the objective of reaching claim amendments which fully address and resolve the issues of record and advance the case over the prior art of record

V. Preparation of Interview Summary

METHOD AND SYSTEM FOR AUTOMATICALLY TESTING A SOFTWARE BUILD
Serial No. 10/677,129
Attorney Docket No. 13768.783.108
Examiner Thuy Chan Dao
Interview Tuesday, April 29, 2008 @ 1:00 EST

(All Independent Claims)

36. (Currently Amended) In a computing system, a method of tracking differences between software builds of a software product, the method comprising:

scanning a first binary software build of a software product to automatically discover classes in the first binary software build, wherein the first binary build comprises a first set of binary files compiled from source code of the software product;

discovering dependencies of the discovered classes;

storing a first dictionary data structure including the discovered classes with their corresponding discovered dependencies;

comparing the first dictionary data structure with a second dictionary data structure, the second dictionary data structure including classes organized with their dependencies of a second binary software build, wherein the second binary build comprises a second set of binary files compiled from source code of the software product by comparing classes and dependencies set forth in the first and second dictionary data structures; and

based on the comparison of the first dictionary data structure with the second dictionary data structure, providing an indication of differences between the first and second binary software builds including:

determining what code produced the differences between the first and second binary software builds; and

then generating ~~a listing of~~ code, from intermediate code, that produced the differences between the first and second binary software builds.
